My Name is Brian Hampton and I was diagnosed with stage 4 bladder cancer in Feb 2014. My specialist gave me a very poor prognosis of surviving and booked me in for radiation and chemo treatment.

My wife who believes in alternative natural medicine and healing and suggested I go and visit Dr Chen(Qi Chen) at Gladesville who worked primarily with Chinese Medicine, acupuncture and dietary plans for people who have been diagnosed with cancer. So I made an appointment to see him.

Dr.Chen started me on the treatment of Chinese herbal medicine, acupuncture and a special dietary plan to help me with the severe side effects of the radiation and chemo treatment and the treatment worked.
I did not experience any serious side effects from the radiation or chemo which was a miracle. I also made a decision to change my life style and diet completely for the rest of my life.

In my opinion Dr Chen's Chinese herbal medicine and treatments are no more expensive then any natural therapist or doctor who treats their patients with alternative natural treatments. Because unfortunately there is no Medicare rebate for natural alternative medicine but who can put a cost on your life and I did not have a problem with the taste ect of the Chinese medicine Dr Chen prescribed anyway. I didn't care what it tastes like ect if there was a chance to save my life.

My oncologist told me he didn't think I would survive the radiation and chemo therapy because I was so deconditioned and weak prior to starting the radiation and chemo treatment. I had lost 25 kgs in weight prior to starting the treatment. My oncologist could not believe how well I was doing during the treatment and not having any side effects and my healing and recovery astounded him.

I am now nearly four years cancer free with the help of Dr Chen. Dr chen's treatment definitely has worked for me and I also made a decision change my lifestyle and diet completely .

My testimony is I believe Dr Chen is a dedicated god given healer and he has helped me by giving me back 4 years of my life so far when my prognosis was "I had practically no chance of surviving "
